DOCTORS APPOINTMENT BOOKING SYSTEM

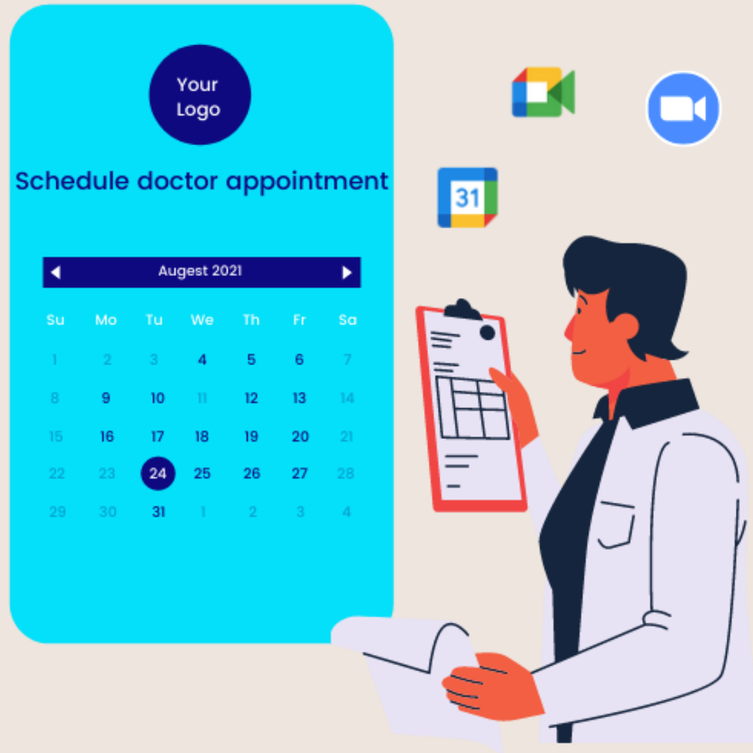

Members: Praful Thapa, Rozan Timalsina, Taseen M Arshad, Imad Shaik, Saanya Khanna

OVERVIEW

A web-based system that lets patients search doctors and book appointments, while doctors manage availability and appointments, and an admin manages users, clinics, and services. The system prevents double-booking, supports confirmations/cancellations, and stores appointment history.

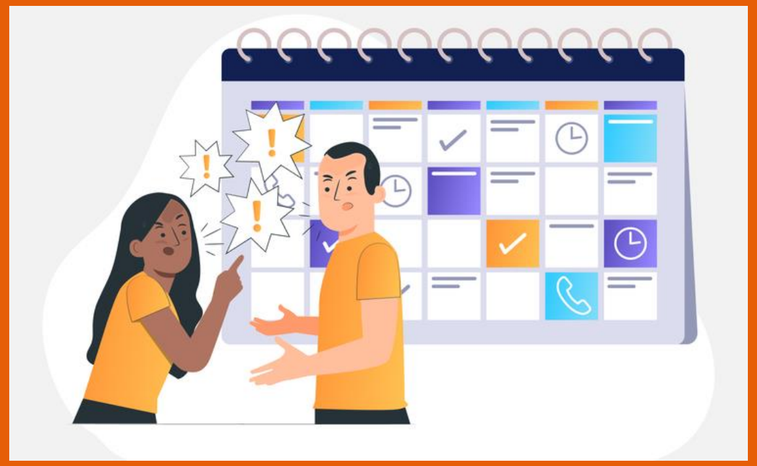

PROBLEM DOMAIN

1. Manual Scheduling Inefficiency

Traditional phone-based booking causes delays and increases administrative workload.

2. Double-Booking and Scheduling Conflicts

Lack of real-time validation leads to overlapping appointments and confusion.

3. Missed Appointments and Poor Communication

Patients often forget appointments due to lack of automated reminders.

OBJECTIVES

1. Appointment Automation

To develop a web-based system that allows patients to book and manage doctor appointments efficiently.

2. Conflict-Free Scheduling

To prevent double-booking and scheduling errors through real-time validation and database controls.

3. Improved Communication

To provide automated notifications and reminders to reduce missed appointments and enhance coordination between patients and doctors.

SCOPE OF THE SYSTEM

In Scope

- Patient registration and login
- Doctor profile and availability management
- Appointment booking and cancellation
- Automated reminders and notifications
- Role-based access (Patient, Doctor, Admin)

Out of Scope

- Online payment processing
- Electronic medical record (EMR) management
- Insurance claim processing
- Pharmacy integration

Patient Functions

- Register/Login/Logout
- Search doctors by specialty/clinic
- View doctor profile and available time slots
- Book, view, and cancel appointments
- Receive confirmation and reminders

Doctor Functions

- Login and manage profile
- Set availability and block time off
- View daily/weekly appointments
- Update appointment status (completed/cancelled/no-show)

Admin Functions

- Manage users (patients/doctors)
- Manage clinics and specialties
- View basic reports (appointments, cancellations)

CONCLUSION

The Doctor’s Appointment Booking System presents a comprehensive and scalable solution to modernize healthcare scheduling processes. By integrating automated booking, structured data management, and secure role-based access, the system improves operational accuracy and streamlines communication between patients and healthcare providers.

The project reflects a practical application of Information Systems principles, combining system analysis, database design, and Java-based implementation to deliver a functional and efficient digital platform.

THANK YOU

FOR YOUR ATTENTION!
